

## Economic Update

Mixed housing data released this week indicated that while activity has improved, challenges to maintain momentum after the first-time home buyer tax credit ends remain. The National Association of Realtors (NAR) reported that sales of existing homes climbed significantly in September, up 9.4% to a seasonally adjusted annual rate of 5.57 million units. This marked a 9.2% increase from September 2008 and represented the strongest level of activity in more than two years, according to the report. NAR Chief Economist Lawrence Yun hopes that the tax credit will be extended into next year, noting the higher sales activity "needs to continue for a few additional quarters until we reach a point of a self-sustaining recovery." Earlier this week, the National Association of Home Builders/Wells Fargo Housing Market Index showed that builder confidence retreated slightly in October. The end of the buyer tax credit is approaching next month, which the report suggested may be hurting sales activity. All of the three index components declined for the first time since September 2008. The Commerce Department reported that housing starts increased a modest 0.5% in September, after declining 1.0% the previous month. The seasonally adjusted annual rate of 590,000 units is 28.2% lower than September 2008.

The Federal Reserve released its Beige Book on Wednesday, which indicated improvements or further stabilization in many sectors throughout the 12 Federal Reserve Districts. The residential real estate and manufacturing sectors were considerably stronger while other sectors, including consumer spending were mixed. However, the noted improvements were classified as "either small or scattered." The commercial real estate sector deteriorated further.

The Conference Board announced its U.S. Index of Leading Economic Indicators, which takes into account things such as manufacturing hours worked, stock prices and consumer expectations, rose by 1.0% in September. The sixth consecutive monthly increase has helped provide investors some reassurance that an economic recovery is in progress.

Bond Market Update

After rising earlier, U.S. Treasuries ended the week mostly unchanged as concerns over next week's \$123 billion in government debt auctions and the outlook for interest rates dampened the markets on Friday. Weakness before auctions has become an enduring theme for the bond market as investors sell securities with the expectation that increased supply will drag down prices, all else equal. Comments from Federal Reserve Bank of Philadelphia President Charles Plosser also weighed on the markets. Mr. Plosser stated his instinct is that the time to raise rates will be well before many of his colleagues think. Futures on the Chicago Board of Trade suggest a 58% chance the Fed will increase its target interest rate by April. At their most recent meeting, on September 23, members of the Fed's Open Market Committee held the benchmark rate in the range of 0.00% to 0.25%, and reported that economic conditions will warrant keeping the rate low for an extended period of time. Meanwhile, the yield curve steepened to 2.48%, widening for the fourth straight week. A steepening yield curve has historically preceded improvement in the economic environment given the increase in liquidity to the financial system. Typically, this liquidity has helped support short-term borrowing and business activity. However, given the current deleveraging crisis, the trickle-down effect to consumers and businesses may be longer than in the past.

Stock Market Update

Despite a number upbeat of earnings announcements, stocks retreated two out of three days this week on mixed economic results. The Dow Jones Industrial Average (DJIA) lost 23.73 points, or 0.24%, this week while the broader S&P 500 lost 8.08 points, or 0.74%.

Third quarter earnings announcements came out with generally better-than-expected results. On Monday, Apple Inc. (APPL) lifted stocks when it reported a 47% increase in profits for the quarter, exceeding analysts' forecast of a 25% increase; Apple gained 4.67% on the news. Among other companies that reported significantly better than expected results were 3M Company (MMM), McDonalds Corp. (MCD), The Travelers Companies Inc. (TRV), and AT&T, Inc. (T).

Technology stocks posted a weekly gain of 0.99%, the only S&P 500 sector to post gains this week, on better than expected earnings from Microsoft (MSFT) and Amazon (AMZN). Microsoft gained 5.42% on Friday when the company announced an 18% year over year decrease in profits. Separately, Microsoft officially launched Windows 7, the latest version of its Windows operating system. Third quarter sales at Amazon increased 28% year over year and the company announced that it expects fourth quarter sales to grow between 21% and 36% as compared to the fourth quarter 2008.

Health care stock posted the largest loss this week with a decline of 1.81%. Health care is now the second worst performing sector - behind utilities - with a gain of 8.14% year-to-date.

Alternative Investments Market Update

On Monday, crude oil snapped an eight session winning streak that culminated in a rise of 10%, and even traded over \$80 per barrel. After a modest pull back on Tuesday, oil futures rallied 3.5% on Wednesday to close at \$81.37. Crude oil managed a close over \$80 per barrel on Friday, now up almost 16% month-to-date. Reports indicating that cooler temperatures may come early this year helped push natural gas prices to a 6.7% rally on Tuesday. Natural gas now trades well over \$5.00 Btu compared to almost breaking below \$3.50 in July. Gold continued to remain near both 52-week and all-time highs, flirting with psychological resistance around the \$1,060 at times during the week.

Forecasts for continued wet weather are pushing back the harvest of corn and soybeans, which has helped drive up prices this week. The U.S. Department of Agriculture has estimated the corn and soybean harvests are 17% and 30% complete, respectively, compared to five-year averages of 46% and 72% for this time of the year.

At the close of last week, hedge fund Galleon was raided by federal agents under allegations of insider trading that included not only the founder of the firm, but also expanded to include arrests of executives at IBM, Intel and McKinzie & Co. All defendants have been released on bail, but a wave of investor redemptions is now forcing Galleon to close down, liquidate all holdings and return money to investors.

MainStreet Advisors performance results reflect time-weighted rates of returns based upon MainStreet Advisors proprietary trading strategies. Performance results reflect the reinvestment of dividends and other earnings as well as the deduction of management and transaction fees. Performance does not reflect additional fees charged by institutions MainStreet Advisors provides investment services. In some cases performance reflects the quarterly rebalancing of assets based upon MainStreet Advisors Tactical Asset Allocation Models.

Past performance may not be indicative of future results and the performance of a specific individual account may vary substantially from performance presented herein. Therefore, no current or prospective client should assume that future performance will be profitable or equal the performance results reflected herein. In calculating account performance, MainStreet Advisors has relied upon information provided by various sources believed to be accurate and reliable but cannot be guaranteed. All past recommendations are available upon request. Investments in equities, fixed income, mutual funds, and exchange traded funds involve risk and may lose value.

Different types of investments involve varying degrees of risk, and there can be no assurance that any specific investment will be profitable. MainStreet Advisors investment strategies may involve portfolio turnover, which could negatively impact the next after-tax gain experienced by an individual client.

MainStreet Advisors displays its performance results in addition to the market index that it believes represents a similar strategy in terms of asset allocation (stocks, bonds), generally accepted investment objectives (growth, income, or balanced), style benchmarks (growth, value, or core), geographic allocations (US, Foreign, or Global), sector allocation potential, and cap size objective (small cap, mid cap, or large cap). The index is shown in order for clients to make a comparison of performance for the designated time period. However, the indices shown above may not completely reflect the risk or volatility of the overall market or of the risk taken by the MainStreet Advisors program. The indexes shown are not intended to be an absolute benchmark for the MainStreet Advisors program due to the fact that clients may not be able to duplicate exact holdings in the indexes shown, MainStreet Advisors programs may reallocate some or all assets in the program to cash in response to market conditions, and MainStreet Advisors programs utilize a flexible management strategy with regard to equity selection, cap size, style, and asset allocation. It should be noted that market indices are always fully invested and holdings are limited to the index charter. The market index used for comparison is an unmanaged index and is a common measure of performance of the relevant stock markets. They are not available for direct investment.
